

IN THE SPECIFICATION:

Please correct the last paragraph on p. 8 as follows:

The final step, as shown in Figure 5E (plan and side views), is to cover the surface of the catalytic layer 153 with a thin layer of PEM ~~455~~ 159. In a preferred embodiment, the flex structure is dipped into a 5% Nafion solution. A thickness of the PEM ~~455~~ 159 should also be controlled so that the liquid file1 can diffuse through this thin layer.
